Introduction

Namespace WebSockets.Core

Classes

ClientHandshake

A sans-io implementation of the client side of the WebSocket protocol.

The business layer logic is not provided. For example when a ping is received, the implementer is expected to return the pong. This is also the case for a close.

DateTimeProvider

Handshake

The base protocol class providing functionality shared by both clients and servers.

MessageProtocol

The base protocol class providing functionality shared by both clients and servers.

NonceGenerator

PublicExtensionMethods

ServerHandshake

A sans-io implementation of the server side of the WebSocket protocol.

The business layer logic is not provided. For example when a ping is received, the implementer is expected to return the pong. This is also the case for a close.
